

## Welcome...

Sal and I have decided to stage this Dulverton Female Production Sale to celebrate our 40 years breeding Angus cattle – it is our number one passion and has been for the entirety 1981-2021.

The Dulverton herd was founded in 1981, I purchased a heifer from Max and Joan Doherty's Tulagi herd for Sal – her 21<sup>st</sup> birthday present, the heifer selected by Sal became the founder of the Dulverton Annie family. No doubting the most notable of the Annies would have to be Dulverton Annie G17 who was awarded Grand Champion Angus Cow at the Sydney Royal Show in 1992. The most notable Annie since is definitely Annie G37. Amazing!! 24 years between the best and the best. Annie G37 is the dam of Dulverton New Approach N208 who has bred so well, he is represented by six daughters in this sale. There you go young fellas, opportunities abound, don't ever underestimate the value of an Angus heifer as a 21<sup>st</sup> birthday present for your beloved partner.

The Dulverton breeding objectives have always been underpinned by the premise that "There is no other reason to produce beef than to satisfy the consumer's expectations for eating quality consistently and price competitively". Our obsession has been to find genetic measures for marbling (as measured on the carcass) and tenderness. Therefore, we have welcomed the Neogen/Igenity genomic measures and do provide this data set for your consideration re this set of sale females.

It's long been our belief that Beef Breed females need to exhibit a feminine form as characterised by body length, well laid in shoulder, neck extension, minimal flat bone, plenty of body capacity including a voluminous pelvic area, with that important "roll" hips through to wide set yet lower than the hips pin bones, udder shape and attachment including fine teats is extremely important, so too is sound feet, which along with the all important shoulder set and hock angulation promotes freedom of movement. Soft, loose, pliable skin with fine slick hair is a must.

Female longevity / stayability is most important to our selection criteria and so we once again turn to the Neogen/Igenity genomic data set to provide a genetic identifier for Female Stayability. Should you investigate the Igenity data set you will note that Angus perform poorly for the female longevity trait. We are extremely keen to improve our performance with this trait as it is paramount re the ability of sons to 'work' for four breeding seasons. Our three most potent female stayability families are the Mandys (represented by 4 in the sale), the Pixies (represented by 5 in the sale), and the Annies (represented by 7 in the sale).

We have developed with Neogen our own selection Index based on four traits:

- Female Stayability
- Feed Efficiency
- Eating Quality (Carcass measured Marbling and Tenderness)
- Beef Yield

These are the traits that matter in terms of identifying superior performance at a profitable outcome for our commercial clients.

Sal and I have spent the past 40 years devoted to the husbandry, and well being of the Dynamic Dulverton Damsels. The challenges in developing our selection criteria, in keeping that set of selection traits applicable to our fundamental premise ("People Eat Meat") to those of the environment and to the whims of the dry have been daunting. Yet it is those challenges, that, at the end of the day make the journey what is – A MAGNIFICENT RIDE!

Importantly the friends we have been able to make, the satisfaction we have gained through working with wonderful clients has certainly added to the reason we wouldn't swap the last 40 years for any other. No doubting our success in having started with Annie A1 in 1981 to us now breeding in the order of 400 registered cows has been very much a team effort and to our current team Tim, Kym, Fiona, and Phil a very big thank you for all you have done and continue to do to keep the Dulverton wheels spinning.

With the marvel of modern medicine and technology Chaps' new hip is 12 months old and he is back annoying the horses – Pat mainly. He's a great walker and is looking after Chaps whilst out mustering the Dynamic Damsels.

We look forward to sharing this 40 year celebration with you. See you at Shannon Vale on the 10<sup>th</sup> of March, you might just be lucky enough to uncover a herd improver.

Chaps & Sal

See [www.dulvertonangus.com.au](http://www.dulvertonangus.com.au) for more information

# SALE INFORMATION

## Inspection

All stock will be penned at Shannon Vale Station from 9am Sale Day, or private inspections can be arranged any time prior to the sale by appointment with the agents or vendors.

## Insurance

Will be available on Sale Day, please speak to one of the Colin Say & Co representatives.

## Rebate

2% rebate available to outside agents introducing potential purchasers in writing 24hrs prior to sale and settle for purchases within 7 days of receipt of invoice.

**Morning Tea & Lunch** will be provided from 9am Sale Day.

## Health

All females catalogued have a J-BAS score of 7.

## Vaccination Program:

All females have been inoculated with

- 7 in1 at weaning plus an annual booster in March 2021.
- Selovin yearly injection administered March 2021.
- Oral Fasinex 240 administered March 2021.
- Cydectin Pour-on administered March 2021.
- Pestiguard vaccination given March 2021.

## Fertility

The heifers and cows have been foetal aged by Hannah Pope of Glen Innes Veterinary Hospital to indicate whether the females are in calf to the AI or paddock sire. The detected sire has been shown in the comments as well as an average of the Predicted EBVs for the progeny. There are no guarantees that every calf will be by the foetal age sire.

## Mating Predictor EBVs

Please note that the Expected average progeny values are provided to assist breeders estimate the outcome of particular mating combinations. These values are NOT GROUP BREEDPLAN EBVs and should not be published as such. The actual EBVs for any progeny resulting from a particular mating are likely to vary from the expected average values.

## Structural Soundness

Structural assessment was carried out by Dick Whale. Dick's assessment assists you improve traits such as length, pastern angle, body capacity etc..

## Delivery

We are happy to organise your transport and delivery with local and interstate carriers. Please confirm your delivery details with Greg Chappell or a Colin Say & Co Agent post Sale.

## Registration

All registered stock as stated in the catalogue are eligible for transfer at the vendor's expense. Please ensure correct name, address. Herd Ident and PIC (Property Identification Code) is printed on the Buyer's Instruction Slip supplied in this catalogue.

## Notice to Buyers

All lots will be sold subject to the usual conditions governing auction sales.

The suffix displayed at the end of each animal's name indicates the DNA parentage verification that has been conducted by Angus Australia.

PV : both parents have been verified by DNA

SV : the sire has been verified by DNA

DV : the dam has been verified by DNA

# : DNA verification has not been conducted

E : DNA verification has identified that the sire and/or dam may possibly be incorrect, but this cannot be confirmed conclusively.

# HOW TO REGISTER with ELITE LIVESTOCK AUCTIONS

Welcome to the new age of selling livestock in  
Australia and **"Happy Bidding"**

-  1 Simply go to **www.elitelivestockauctions.com.au** using your desktop, laptop, iPad, iPhone or android device
-  2 Click on the **"Sign Up"** page / link
-  3 Create a bidding profile using the bidder registration page.  
*(You can either register as a livestock agent, company or private buyer.)*
-  4 Agree to the Elite Livestock Auctions Terms & Conditions and the Selling Agents Sale Terms & Conditions as printed in the official Sale Catalogue
-  5 Click **"Register"**
-  6 You will then be notified by email that an account has been created
-  7 Once an account has been created you are all **"Set to Bid"**
-  8 Each auction can then be viewed by clicking **"Live Auction"** logo on the Elite Livestock Auctions website
-  9 Once you receive email notification that your account has been created please go to the sale you wish to bid at and click **"Request to Bid"**
-  10 The sale agents will then approve your application to bid and on the sale catalogue you will see **"✓ Bid Request Approved"**
-  11 On Sale day simply login, click **"Enter Auction"** on the catalogue page and you can start bidding.  
*(There is no need for software download)*
-  12 At the completion of the auction, invoicing will be carried out as per your registration details by the Selling Agents.

Having trouble registering and logging in?

## UNDERSTANDING ESTIMATED BREEDING VALUES (EBVS)

Birth	<b>CEDir</b>	%	Genetic differences in the ability of a sire's calves to be born unassisted from 2 year old heifers.	Higher EBVs indicate fewer calving difficulties in 2 year old heifers.
	<b>CEDtrs</b>	%	Genetic differences in the ability of a sire's daughters to calve unassisted at 2 years of age.	Higher EBVs indicate fewer calving difficulties in 2 year old heifers.
	<b>GL</b>	days	Genetic differences between animals in the length of time from the date of conception to the birth of the calf.	Lower EBVs indicate shorter gestation length.
	<b>BW</b>	kg	Genetic differences between animals in calf weight at birth.	Lower EBVs indicate lighter birth weight.
Growth	<b>200 Day</b>	kg	Genetic differences between animals in live weight at 200 days of age due to genetics for growth.	Higher EBVs indicate heavier live weight.
	<b>400 Day</b>	kg	Genetic differences between animals in live weight at 400 days of age.	Higher EBVs indicate heavier live weight.
	<b>600 Day</b>	kg	Genetic differences between animals in live weight at 600 days of age.	Higher EBVs indicate heavier live weight.
	<b>MCW</b>	kg	Genetic differences between animals in live weight of cows at 5 years of age.	Higher EBVs indicate heavier mature weight.
	<b>Milk</b>	kg	Genetic differences between animals in live weight at 200 days of age due to the maternal contribution of its dam.	Higher EBVs indicate heavier live weight.
Fertility	<b>DtC</b>	days	Genetic differences between animals in the time from the start of the joining period (i.e. when the female is introduced to a bull) until subsequent calving.	Lower EBVs indicate shorter time to calving.
	<b>SS</b>	cm	Genetic differences between animals in scrotal circumference at 400 days of age.	Higher EBVs indicate larger scrotal circumference.
Carcase	<b>CWT</b>	kg	Genetic differences between animals in hot standard carcase weight at 750 days of age.	Higher EBVs indicate heavier carcase weight.
	<b>EMA</b>	cm <sup>2</sup>	Genetic differences between animals in eye muscle area at the 12/13th rib site in a 400 kg carcase.	Higher EBVs indicate larger eye muscle area.
	<b>Rib Fat</b>	mm	Genetic differences between animals in fat depth at the 12/13th rib site in a 400 kg carcase.	Higher EBVs indicate more fat.
	<b>P8 Fat</b>	mm	Genetic differences between animals in fat depth at the P8 rump site in a 400 kg carcase.	Higher EBVs indicate more fat.
	<b>RBV</b>	%	Genetic differences between animals in boned out saleable meat from a 400 kg carcase.	Higher EBVs indicate higher yield.
	<b>IMF</b>	%	Genetic differences between animals in intramuscular fat (marbling) at the 12/13th rib site in a 400 kg carcase.	Higher EBVs indicate more intramuscular fat.
Other	<b>NFI-F</b>	kg/day	Genetic differences between animals in feed intake at a standard weight and rate of weight gain when animals are in a feedlot finishing phase.	Lower EBVs indicate more feed efficiency.
	<b>Doc</b>	%	Genetic differences between animals in temperament.	Higher EBVs indicate better temperament.
Structure	<b>Foot Angle</b>	score	Genetic differences in foot angle (strength of pastern, depth of heel).	Lower EBVs indicate more desirable foot angle.
	<b>Claw Set</b>	score	Genetic differences in claw set structure (shape and evenness of claws).	Lower EBVs indicate more desirable claw structure.
Selection Index	<b>ABI</b>	\$	Genetic differences between animals in net profitability per cow joined in a typical commercial self replacing herd using Angus bulls. This selection index is not specific to a particular production system or market end-point, but identifies animals that will improve overall profitability in the majority of commercial grass and grain finishing beef production systems.	Higher selection index values indicate greater profitability.
	<b>DOM</b>	\$	Genetic differences between animals in net profitability per cow joined in a commercial self replacing herd targeting the domestic supermarket trade.	Higher selection index values indicate greater profitability.
	<b>HGRN</b>	\$	Genetic differences between animals in net profitability per cow joined in a commercial self replacing herd targeting pasture grown steers with a 250 day feedlot finishing period for the grain fed high quality, highly marbled markets.	Higher selection index values indicate greater profitability.
	<b>HGRS</b>	\$	Genetic differences between animals in net profitability per cow joined in a commercial self replacing herd targeting pasture finished steers.	Higher selection index values indicate greater profitability.

## Genetic Type and Structural Assessment

All the females catalogued for this sale have been inspected and assessed on the Genetic Type and Structure system, by Dick Whale. They were all considered acceptable for soundness and muscling. If any potential buyers would like to discuss any of the bulls prior to the sale, please contact Dick on 0427 697 968.

### Structural Soundness Traits

**Feet** - Evaluation of front and rear feet, with 25 being ideal. Scores less than 25 exhibit some scissor claw in the feet. Scores greater than 25 are open clawed.

**Rear Leg Set** - Evaluation of rear leg structure with 25 being ideal. Scores greater than 25 tend towards being sickle hocked, less than 25 toward post legged.

**Feet and Pasterns** - Evaluation of the length and strength of pastern and foot angle. Scores greater than 25 indicate stronger pasterns with more depth of heel.

### Descriptive Traits

**Stature** - Evaluation of bulls for maturity pattern and frame size. A stature score of 25 is average. This score may be influenced by age of dam, nutrition, etc.

**Capacity** - Evaluation combines the depth of rib, spring of rib, and width of chest floor. Scores greater than 25 indicates a bull with larger capacity.

**Body Length** - Evaluation of body length from point of shoulder to pin bone. Scores greater than 25 indicate longer body length.

**Muscle Score** - Is the muscularity of the bull devoid of subcutaneous fat. Higher scores indicate animals with higher yield attributes.

Scores :            25 = C muscle  
                         30 = C+  
                         35 = B-  
                         40 = B  
                         45 = B+

**Doability** - The ability of a bull to deposit fat in the fat depots, relative to their peers under a common management regime.

**Udder Depth** – How far the Udder descends below the underline of the female.

**Udder Attachment** - Evaluating the strength of the attachment between the Udder and the body.

**Teat Size** - Evaluation of the teat size.

Scores:            5 = Excellent  
                         4 = Very Good  
                         3 = Acceptable  
                         2 = Undesirable  
                         1 = Very Undesirable

## COVID - 19

Please note that we will continue to monitor the guidance issued by the Australian Government and medical authorities, and will adhere to the current Covid-19 regulations on Sale Day.

## INTRODUCING THE Q'S...

We have catalogued 31 Q's for your perusal and consideration. Our selection of this group is based on a number of criteria:

- The fact that the Australian Beef Breeding Herd has been decimated by the prolonged dry means the National herd re-build will need both increased numbers of heifer bulls and bulls capable of producing high percentages of replacement females.
- To provide as representative a group of Dulverton bloodlines as possible.
- To provide a number of 'Special Attractions'.

### HEIFER BULL BREEDERS

Fifteen of the 31 Q's are by sires we selected as heifer bulls, and thirteen are born from N's (first calvers). Note we definitely don't keep females that have been assisted at birth and as far as calving ease goes we are all about BUILDING PELVIS'S with both area and our specified shape to enable ease of calving. Live calves is the GOAL at Dulverton not light birthweight. Lighter, smaller calves loose their ability to survive and grow at economically desirable rates. First calf heifer's calves need to be able to achieve the targets we set for weight and so skeletal development to enable:-

- The female to be cycling adequately, target heifer weight – 320kg
- The female to calve unassisted. That is, sufficient skeletal development to enable a well enough developed pelvic area to carry, present and deliver a live thirty four (34)kg calf. Target heifer weight 460kg.

At Dulverton we select our "Heifer Bulls" from the group of bulls born unassisted; born early, and born from first calf heifers.

### FROM A REPRESENTATIVE SAMPLE OF DULVERTON FEMALES

The Dams of the Q's are a representation of the current Dulverton genetics and as much include females with our most potent proven sires and dams. The most notable of the sires include C. Gunsmoke J134, B. Frankel's super MSA Index performing son Dulverton Jackpot J267, TC Franklin, Te Mania Kilkenny K912, Dulverton Herbert H8, Musgrave Big Sky, Esselmont Lotto L3, CN Equator F10, and Sydgen Black Pearl. Our very best cow Annie G37 is represented by six daughters of Dulverton New Approach N208 and one of our Attractions Lot 46 Annie Q182.

### 'Q' SPECIAL ATTRACTIONS

We believe there are at least half a dozen very special females amongst this set of Q's. They include the Dulverton Montjeu M13 daughters in Lot 22 Q006 and Lot 52 Q299. The Knowla McCaw M20 daughter Lot 24 Q016, the Dulverton New Approach daughters Lot 32 Q082 and Lot 44 Q162, the E Lotto L3 daughter Lot 36 Q102 and the Dulverton Medaglia M28 daughter Lot 46 Q182.

Q114. Here's one definitely worth considering as a breeder of heifer bulls. N106 calved super to first calf heifers, his pedigree combines both Dulverton L16 & CN Equator F10, both magic heifer bulls. Length, shoulder set, roll hip to pin, capacity and doability. A.I. 7/10/20 to Dunoon P1039, depastured 11/10/20 Dulverton Quaffa Q108 out 23/12/20. PTIC. Grade 4.

Q182. Here is arguably the best female in the sale and a twin from the great Annie G37 to boot! She is deep, thick, easy doing, ideal bone content with her thurls and pins as wide as her volume, promoting hip set. Don't miss her... it has taken us 40 years to get to this!! A.I. 7/10/20 to Dunoon P1039, depastured 11/10/20 Dulverton Quaffa Q108 to 23/12/20. PTIC. Grade 5.

R23. Doubtful we have bred a heifer with this amount of capacity, depth, thickness and width across the chest floor. Exhibiting medium frame potential with ideal bone to muscle ratio. She's a stunner - the Ashlands are looking the Real Deal!. Grade 6.

Purchaser: ..... \$.....

## **INTRODUCING THE R'S...**

The decision was taken to include a handful of baby R's, primarily to provide those yet to use these two outstanding young sires the opportunity of 'leap frogging' the pack. We are extremely convinced of Moe's superiority; he is Mr Consistency. The son we purchased from Stephen Chase Waitara Princeton P90 continues to come ahead in leaps and bounds and his (Moe's) progeny from our first calvers are very impressive.

GAR Ashland too is definitely indicating that he may be the real deal. We are super impressed with Lot 54 Anzac R23. Ashland is very easy calving and has produced that volumetric daughter with a near perfect pelvis set up.

Dulverton Pins P101 has to be seen to be believed and sure its early days yet but he is more than holding his own with those two industry standouts in his contemporary group.

Don't be afraid to purchase one of these super youngsters, take her home, grow her to 320kg by the end of first week in October and join her to the super young sire of your choice.

# 55
